

Note: Below is a sample BCAT report for a person with Mild Cognitive Impairment, amnesic subtype (aMCI). It is provided to give you a sense of what the reports look like. In an actual report that you would generate, much more information would be provided, including some clinical considerations. We have also provided page one of the two-page primary BCAT test to give you the "look and feel" of actual BCAT items. Certified users have access to all BCAT tests and reports.
